

HR

Posjedujemo jednu od najsuvremenijih linija za emajliranje dimovodnih cijevi u Europi.

Radimo s tekućim i s praškastim emajlom, a u ponudi imamo široku paletu boja u mat ili sjajnoj verziji te time zadovoljavamo potrebe svih kupaca. Emajlirani dimovodni elementi izrađeni su od čeličnog lima na čiju je površinu nanesen sloj staklastog emajla. Odlikuju se povećanom otpornošću na koroziju i estetskim izgledom. Imaju toplinsku otpornost do 600 °C.

ENG

We have one of the most modern enameling lines for flue pipes in Europe.

We work with liquid and powder enamel, in a wide range of colours, both matte and glossy to satisfy the needs of all our customers. Enamel flue elements are made of steel sheets whose surface is covered with a layer of glass enamel. They are distinguished by their increased resistance to corrosion and aesthetic appearance. They are heat resistant up to 600 °C.

DE

Wir haben eine der modernsten Linien für die Emallierung von Rohren in Europa.

Wir arbeiten mit Flüssig- sowohl aber auch mit Pulveremalle und bieten eine breite Palette von Farben in der Matt- oder Glanzausführung an und erfüllen so die Bedürfnisse aller Kunden. Die emallierten Rauchrohrelemente bestehen aus Stahlblech, auf dessen Oberfläche eine glasartige Emailschiicht aufgebracht ist. Sie zeichnen sich durch erhöhte Korrosionsbeständigkeit und ein ästhetisches Erscheinungsbild aus. Sie haben eine Wärmebeständigkeit von bis zu 600 °C.
